THE TEMPLE PUMP COMPANY

MANUFACTURERS

Gasoline Engines, Windmills, Pumps, Acetylene Lighting
Plants, Tanks, Etc.

GASOLINE ENGINE BUYERS ATTENTION

This illustrates a slow speed, heavy duty Engine of the highest type of construction.

It leads the world in the following advantages:

1st—It reduces the consumption of fuel per horse power from one-third to one-half of the average horizontal engine.

2nd—Two-thirds of the bulk and one-third of the weight of the average horizontal engine is dispensed with, and at the same time, the violent vibrations of the average horizontal engine are overcome. These advantages greatly increase its usefulness.

3rd—The crank shaft of this engine is placed over the cylinder, producing the following results:

1st—Explosions are located low down on a low flat base, the earth receiving the shock of the explosion. 2nd—Lubrication by gravity is secured which greatly reduces friction. 3rd—The piston moving up and down, friction is reduced to a minimum. 4th—The governor is placed on the crank shaft, enabling the placing of the pulley on

either side of the fly wheels. 5th—It is much easier moved than upon a temporary foundation, its full power can be utilized. We also manufacture 50 H. P. Engines.

SIZES—This engine is made from 2 to 25 H. P. Write for full particulars.
