The Only Cold Milk Skimming Separator on the Market

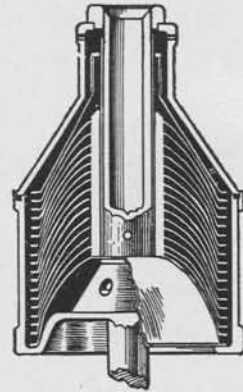

All you good farmer dairymen know what a nuisance it is to have to heat your milk on a cold day and then have it clog the machine after about three turns of the handle. You won't have this trouble with

THE IOWA

It skims as cold as 50 to 60 degree milk to a trace and secures cream of any degree of richness. Our patented curved disc bowl does the work. It skims hot or cold milk; milk from fresh cows or from a herd of strippers, and skims perfectly under all conditions of feeding.

Easily Cleaned—Easy Running

Every housewife will appreciate these two qualities in The Iowa. Our catalog describes all the details. Write for it and then be sure to see the machine at the nearest Iowa dealer's. We will tell you where.

Catalog Free.
