

NORTHRUP KING & CO'S. EARLY MATURING STERLING SEED CORN

For Northern Minnesota
North Dakota and Montana

EXTRA EARLY MINNESOTA No. 13 (Haney Strain)

This strain has been grown in North Dakota for 25 years and is earlier in maturity and more thoroughly acclimated than most of the so-called North Dakota grown corn. Our corn is grown near Minneapolis from seed coming directly, each year, from Mr. Haney at Grand Forks, North Dakota. This preserves its early maturity and assures our customers a better quality of seed than can be produced farther north.

EXTRA EARLY NORTHWESTERN DENT

Crookston Experiment Station Strain

This strain is about a week earlier than the standard central Minnesota strain and matures quite consistently through extreme northern Minnesota, North Dakota, and Montana. Plants grow 5 to 7 feet high, ears 5 to 7 inches long with 12 to 14 rows. Has red kernels with a white cap. Adapted for husking as far north as Canadian border and is valuable for bundle feeding in northernmost sections where corn is grown.

18 OTHER VARIETIES

Write for the Sterling Seed Corn Bulletin

NORTHRUP, KING & CO'S. STERLING POULTRY FEEDS

This line is composed of a full line of prepared rations for poultry — a separate ration for each period of growth, from baby chick to laying hen. Sterling Egg Mash and Sterling Scratch Feed is a guaranteed-to-satisfy ration for laying hens. When your chicks come, give them Sterling Buttermilk mash and later Sterling Growing mash. You will be pleasantly surprised at results.

SOLD ONLY THROUGH DEALERS
