

## Faculty

*E. R. CLARK, B.S.A.*, Univ. of Wis. Pure Seed Specialist.

Subjects: Cereal Crops, Farm Accounts, Home Projects.

*R. S. DUNHAM, B.S.A.*, Univ. of Illinois. Agronomist.

Subjects: Soils, Forage Crops, Farm Management, Compative Agriculture.

*T. M. McCALL, B.S.A.*, Iowa State College. Horticulturist.

Subjects: Botany, Fruit and Vegetables, Plant breeding, Debate.

Soils, Farm Management, and Field Crops are taught and investigated experimentally by the Agronomy division. The experimental trials require 2,000 plots totaling 60 acres. Pure seed is produced and distributed to farmers in the Red River Valley. Last year 3,000-bushels of small grain and corn were produced and dispensed for seed.

The three phases of work in Horticulture consist of instruction, experimentation, and extension. The subjects of instruction include: Plant Life, Floriculture, Farm Forestry, Fruits, Vegetables and Potatoes.

Experimental projects are conducted with trees, small fruits, flowers, sugar beets, and garden crops.
