### GIRLS' ATHLETICS

"Recreation is intended to the mind, as whetting is to the scythe; to sharpen the edge of it, which otherwise might grow blunt and dull."

Interest continues to center around the new physical education building, and the results of the opportunities offered in this department have been most gratifying. The physical education program consists mainly of group games and sports. Inter-class kitten ball contests start the physical education program for the year, being followed by inter-class basketball. Much class spirit is evidenced at this game and the results of these contests are far-reaching. Valuable lessons in coordination, cooperation, and sportsmanship are the by-products of competitive sports, which when carried over into everyday living help us to play the game of life more effectively.

Progress in swimming has been remarkable. Approximately ninety per cent of all the girls are able to pass the deep water emergency tests at the end of the first year, while many have progressed much farther. The inter-class swimming meet and field day activities close the physical education program for the year.
