

FAE HUGHBANKS

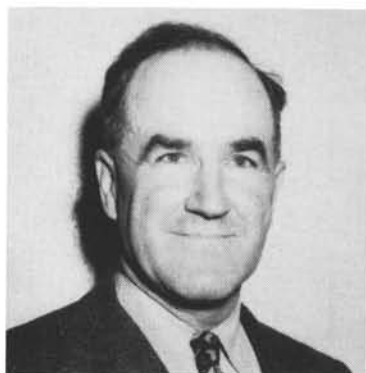

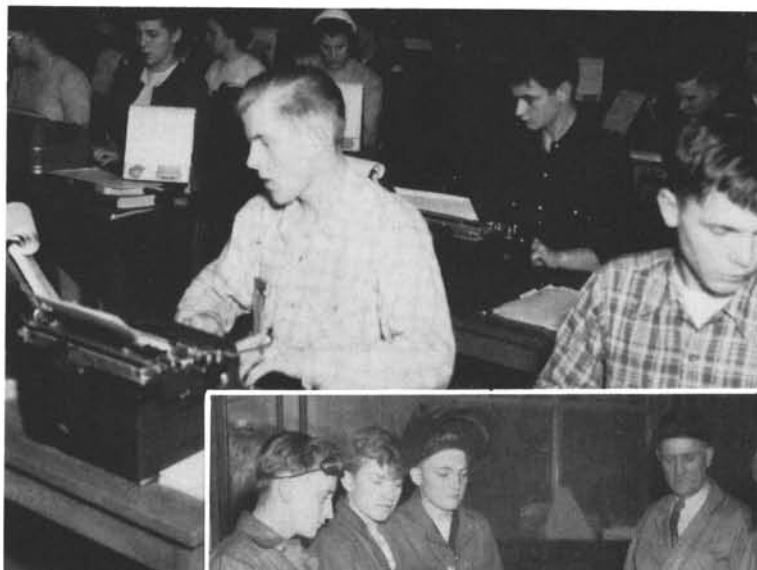

HARRY SODERBURG

They taught us how to type

ARNOLD M. FOKER

WILLIAM M. BARRON

At the Northwest School, we students are given practical courses which will develop the skills modern farming calls for.

In Mr. Barron's classes we learn how to take a motor apart and put it back together without having any pieces left over. In Motors II we bring motors from home and overhaul them in the shop at school. In field machinery class we learn the principles involved in the construction and operation of farm machinery.

Mr. Soderburg teaches us the fine arts of rope, metal and concrete work in farm shop. In his blacksmithing class we learn how to use forges and other tools efficiently. Through the medium of his welding class, we learn the latest

methods of electric and gas welding.

If you have the urge to use your hands as we have, then you will be intrigued by the well equipped carpentry shop under the supervision of Mr. A. M. Foker. In the highly educational and fascinating mechanical drawing classes, we learn first the fundamentals of drawing, and then how to design buildings.

We students who have taken or are taking typing appreciate the efforts of our highly specialized instructor, Miss Hughbanks. Nimble fingers and steady nerves count much toward skill in typing. In bookkeeping we receive detailed training on the subject itself and how to apply it in later life.
