

Mr. Bergman's history class prepares tomorrow's assignment.

PHYSICAL SCIENCES

GENERAL SCIENCE

CHEMISTRY

HORTICULTURE

BIOLOGY

The subjects of the physical sciences give us interesting information about the world of matter. General science gives us a brief introduction to the broad field of science. Chemistry is the study of the structure of the world of matter. Horticulture is the study of plants. To watch these plants grow, develop, and produce is of interest to many. Biology is the delightful study of all living things. What is life? The greatest mind in all the world today can not tell you, but probably some day, today's student may be able to give a better answer to this great question.

Lysaker's freshman science.
