

Probably this will solve the Hill Building problem.

## MATHEMATICS

GENERAL MATHEMATICS

GEOMETRY

ALGEBRA

All the progress in the physical sciences would never have taken place if it were not for mathematics. Geometry is founded on eight universally accepted axioms.

From these accepted principles, this particular discipline builds up to a very complicated system, at least, as far as the poor students are concerned.

Algebra is a branch of mathematics founded by the Arabic people. How they ever thought of it presents a problem too. Some of the less thoughtful students probably wish the ancient Arabs had never thought.

Who said, "There is no such a thing as a straight line?"
