**RELATED ARTS**  
**SHORTHAND**  
**SOILS**  
**TYPING**

Besides teaching all the subjects of the average American high school, this school also teaches subjects of a practical nature that prepare us for life. These subjects will prepare those students for life who do not plan to go on to college. Most high schools teach and concentrate on college preparatory work. The broad curriculum of this school gives the student the choice of preparing himself adequately for college or life. The wide listing of subjects in this department are those that prepare for life.

The Practical Arts Department prepares the girls for good home management; boys for good economical and progressive farming. Other students interested in business and secretarial work are adequately prepared for a job after school completion.

Miss Hughbank's typing I class.
