

Grains and Soil

DR. OLAF SOINE, Crookston, Minnesota
B.S., St. Olaf College, M.S., Ph.D., University of
Minnesota
Farm Management, Soils

Grain Crops is a required course usually taken by the freshmen. The main emphasis of this class is placed upon cereal crops and legumes. Further study is made of the structure of plants, controls for diseases, methods of preparing seeds and soil for the right seeding. We also learn the different varieties of grain and where each can be grown with the least amount of difficulty.
