

Electricity

Any way you look at it, electricity class is practical. Anybody can use a little knowledge of electricity no matter what he does in life. Perhaps you may want to wire your own home or fix broken electrical appliances; it may help you in your military life as an electronic engineer.

Mr. Miller believes in showing educational films. His belief is that it demonstrates vital relationships and theories which would be impossible to demonstrate in class because of the limited time and material.

The classroom also has the benefit of a circuit demonstration board which is used to demonstrate parallel and series circuits as well as ammeter and voltmeter circuits.

MR. EUGENE MILLER, Crookson, Minnesota
Superintendent of Buildings and Grounds, Electricity, Aeronautics, M.A., University of Minnesota.
