

## Carpentry

As well as being the advisor to the Carpentry Club, Mr. Menzhuber teaches Carpentry I and II, and Mechanical Drawing. All of these courses help the boys who take them to apply these new-found abilities to many practical uses in the home as well as on the farm.

The industrial arts program at our school is provided with a well equipped shop in which students get the opportunity to build model hog houses, automobile garages, and a variety of other practical and useful assignments.
