

Welding

Arc Welding is the advanced stage of gas welding. Only students who have successfully completed gas welding may take arc welding. Perhaps this is due to the greater difficulty being able to work metal successfully with an electric welder.

In Owen Hall, gas welding is taught by Mr. Soderburg. Most of the students wear coveralls to protect them from flying sparks, but sometimes it doesn't help. Oxygen and acetylene gases are used in this form of welding. The work exercises begin with simple welding two pieces of metal together and proceeds to more difficult welds.

MR. HARRY SODERBURG, Crookston, Minnesota, B.S., M.A., University of Minnesota; Gas Welding, Arc Welding, Farm Machinery, Farm Equipment.
