

Engines

Engines class teaches students various facts on the care and repair of engines. It is one of the most interesting and helpful classes that can be taken in school. The class period is two hours long. The first hour is spent in the classroom where the students work mainly on the facts and figures concerning engines, while the remaining hour is the most interesting because it is spent repairing and overhauling engines. In their shop Mr. Diehl emphasizes the learning of the basic principles of mechanics. In tearing motars down the boys are instructed to do it with a purpose so that it can be put together efficiently.

MR. RODGER DIEHL, Hillsboro, North Dakota, B.S. North Dakota State University; Engines, assistant counselor Stephens Hall.
