

Chemistry

In this advanced world we live in, chemistry is playing an ever increasing role in business, farming, and most other lines of work. Through chemistry we are able to better understand the world in which we live.

Mrs. Braaten has tried to help us understand the different forms of matter and their relationships with one another. This understanding of chemistry will help us in whatever form of work we plan to enter in later life.

MRS. GRETCHEN BRAATEN, Crookston, Minnesota; B. A., Gustavus Adolphus College; English, Chemistry; Counselor, McCall Hall; G. A. A. Advisor, Junior Class Advisor.

What does a thought look like?
