

Eugene C. Miller
Ag Engineering Technology

Harry Soderburg
Ag Engineering

Dr. Olaf Soine
Soils

Others, Crops or Wildlife

Flexibility describes the Agricultural Division's curriculum, for even experienced older students will find a program suited to their needs. Since the University owns fine herds of animals and farms almost 1300 acres, these facilities and operations serve as a laboratory for men majoring in these areas. Training in processing and merchandising of agricultural products, management, sales and service, and agricultural finance and economics are all offered at the college to help supply the need for workers in these fields. If interests lie in agricultural aviation or in recreational, wild life, or conservation areas, the college has an excellent group of studies here.

Dr. Harvey Windels
Animal Science

Two Richards (Kaltenberg and Teal) ponder a problem in Mechanics & Electricity Lab. Below: Three ag students admire the school's registered Holstein herd.
