

Have big choice

Diversity describes the Agricultural Division programs. There's something for everyone interested in the field, even the older student with experience. So far only one woman has crashed this male sanctuary, (she's in horticulture) but give the girls a little more time.

Eleven full-time and four part-time instructors work under the direction of Mr. Hasslen. Since a number of these are also members of the staff of the Northwest Experiment Station, a 73-year-old institution devoted to research, students registered in agriculture also benefit by their knowledge and experience. The University's fine herds and extensive acreage serve as laboratories in these areas.
