

in Diverse Areas

Career opportunities in agriculture and related fields are enormous today for those who have scientific and technical education. This is why UMTCC offers a variety of programs leading to the Associate in Applied Science degree. Major Programs in the Agriculture Division include business administration, engineering technology, production, and agricultural technologies, each with a number of options. An innovation for freshmen starting this fall will be a required preoccupational preparation unit of twelve weeks to be taken after the student has accumulated forty-five credits, provided he plans to earn a degree. This college division is the largest, both in faculty and enrollment, at the Crookston branch of the University of Minnesota. Harland Hasslen is chairman of the staff of sixteen. The division benefits from the expertise and facilities of the Northwest Experiment Station located on the campus.

Supper time in the sheep barn finds Kevin Nelson and John Kohler (**BELOW**) lending a helping hand to a newborn lamb. **Sparks fly** as Al Roebke (**RIGHT**) sharpens his tools in welding class.
