

"In order to build up muscles, exercise is a must," says Mr. Ly-saker's phy. ed. class (ABOVE). Keith Strack (RIGHT) records plant data in botany class.

Mrs. Flom's communications class discusses the four phases of communication — reading, writing, listening, and speaking.

Though no degrees are granted in general education at the University of Minnesota Technical College, this division is regarded as the cornerstone of the building that is called a technical college education. Here the student receives his background preparation in communications skills, in science, in health and in behavior, and in the cultural and social developments necessary to citizenship, happiness, and success. All men and women are enrolled in studies in this area at some time during their residence at Tech. Chairman of the department is Dr. David Stoppel, who directs a staff of twelve full-time instructors. Several do part time teaching in the division.
